We've taken our popular pneumatic level loader design and made it even better. The new PalletPal 360 Air™ offers workers complete 360° access to loads. All of its components are contained within the diameter of the turntable ring. There are no protrusions, projections or obstructions, so reach-over zones are eliminated (see illustration below).

**Features**

- Heavy-duty reinforced airbag automatically adjusts as boxes are added or removed from pallets, keeping loads at a convenient, comfortable working height.
- Low-friction turntable spins easily for nearside loading and unloading.
- Extremely stable base - no lagging required.
- Ideal for use with non-uniform loads or loads of varying weights.
- Portable: requires no electrical power. Simply inflate the airbag with shop air or a portable compressor and use it anywhere.
- Integral fork channels for easy relocation.

When viewed from the top, the ergonomic advantage of the PalletPal 360 Air™ is obvious. The green area shows where workers can stand with unencumbered 360° access to loads.

Competitive units have obstructions that significantly reduce worker access to loads.
